Bill's Stack List

A line about each stack

2024

Table of Contents

Intro

This document lists links to each stack for my RapidWeaver stacks collection. I also have other documentation online at https://rw2.wdgeo.com/rw.

I've been using RapidWeaver since version 7. I first experimented with RW 6, but since I was using DreamWeaver on my 32bit Mac, RW 6 seemed a little much. Then macOS went to 64 bit and Dreamweaver wouldn't work, so I purchased the latest version of Rapidweaver, ver. 7 by this time, and I got hooked.

As of Dec 13, 2023 RW Version 8.9.4 (20901) says I have over 3,194 stacks.

Purchase History
- https://rw2.wdgeo.com/bf2023/

Big White Duck

(Not in stack links listed... Blueprint, Glitch, Bevel, Billboard Mouser)

- Free Stacks (Donations Accepted)

11. Site Wide. Page Specific. Stack Specific.
12. FadeInCSS - Wrap the FadeInCSS stack around the content you want to fade in
13. FontAwsome Enabler - Add Fontawesome Icons
14. GoogleSearchWords - Enter a couple of search into the GoogleSearchWords Stack and your website visitor will be directed to a Google page with the search words you have chosen.
15. Height & Space - Fixed height takes care of small heights
16. Hide Overflow - If you use the Foundation theme you'll know it has overflow problems with the Stacks default columns. The HideOverflow also works well with the FadeInCSS Stack SlowScale feature and a couple of other DeFliGra Stacks. No Demo Page.
17. HiTuber - Responsive Youtube player
18. LineDeluxe - Very customizable Horizontal Line Stack. Define thickness, color, shadow. Make it solid, dotted, dashed and more.
19. Messenger Chat - Positions a button at the right bottom of your website that'll allow your visitors to send a message to your Facebook page through Messenger. No Demo Page
20. PageScale - Scale entire Stacks page in 10% - 200% steps
21. PaperWeightCalc - Calculate the weight of a brochure
22. Random number - Define a low an high number to reveal the lucky number (no demo).

23. Resp MaxWidth - Define up to 3 breakpoints: How padding are defined for each breakpoint and what max-width to break to.
24. TextMarker - Hilites multilined text
25. Tivoli - Animated background and text color. Eye catching.
26. ToggleRabbit - It fires every time a click is made on your Stacks page. Use it to draw attention to news or special info.
27. Toolbox -Txt B4 After - Helper stack for ZebraTables stack

Grid

1. Boxing - PageLayout Tool with 8 stacks making it easy to create and maintain a boxed layout. Main feature: You can control all settings from the 'master stack
2. Cellmate,
3. Dropzone,
4. Gogrid - Drag and drop the columns and they'll adjust to the width of your page no matter if you have 3, 4, 5 or 25 columns for that matter.
5. Goright - Slider, fairly simple, click/drag, 10 items max
6. Grid and Grid Box - Grid that will adjust to the width of the screen
7. Hagrid - 1-12 Column Grid
8. Landscape Scroll - Create an Apple like horizontal landscape scroll layout
9. Reflow - Advanced grid with a lot of settings. Create a fixed width below 320 px (probably aprox 260 - 280 px) and have it reflow on all devices.

10. Sidecar - Flexible two column stack
11. Sireco - 1 - 100 columns with flexible 3-columns settings
12. Sireco Flex
13. TheGrid - Responsive grid, can make link out of grid

Layout

1. Backpacker and Overview - Organize crowded Rapidweaver Stacks page
2. BottomStick - Stick a stack to the bottom of the bottom stick stack
3. Center - Center stack content horiz and/or vertically
4. Easy Youtube Audio - Easy to cut/paste Youtube link
5. Equal Height - Create content within a grid with equal heights
6. Fixme - Create floating stacks: Floating button bars, floating header bars, floating buttons, floating almost anything.
7. Google Map (GM) Expander - Responsive Google Map. Expands your GoogleMap to a full width background and allows you to position stacks on top of the GoogleMap.
8. Headline - Create blocks of headlines & content (text stacks, image stacks and other Stacks.
9. Layer - Layer text, images, buttons, movies
10. Listig - Advanced layout stack to create lists & layouts
11. Niceframe - Responsive iFrame stack that combines an iFrame with viewport height
12. Priceless - Price lists in a table like style

13. Respond and Responder - Make your website respond to the size of visitors display
14. Snaps - User arrives at the right spot at the right time. Stack Me Stack takes full advantage of the Scroll Snap (Snap) stack.

19. Tell Me about it - Make it fast and easy to tell a story
20. Text Fit - Adjust the size of the text to the available width of the surrounding Stack
21. Zebra - Tables with advanced styling options

Doobox

- Note 1: To retrieve documentation: Click Links below.
- Note 2: If links don't work, check Doobox Website
- Note 3: Alternatively, check the Wayback Machine
- Note 4: * Means I found a link to the documentation
- Note 5: The Doobox online documentation links were deleted when Doobox "started over" in 2022. As they add stacks back to their offerings, documentation is made available. Some new Doobox stacks are being added. I have 71 of their stacks, acquired prior to them "starting over". I'm not likely to purchase any more as the documentation could be removed.
  - Doobox Bundle $ - *(Premium Stacks Deal):*
    1. Montage 500px
    2. Align - Allows you to re-align text & images responsively. Thanks to a new feature of the Stacks plugin API this is more intuitive than ever before
    3. Anchor - Scroll to anchor sections in this or any other Stacks page in your website

- Content - Paragraph, Header, Logo, Image, Footer Text, Flex Video, Blockquotes, Inline List, Printer, vCard, Price Table
- Buttons/Navigation - Button, Breadcrumb, Side Nav, Top Bar, Button Group, Inline Nav, Off Canvas, Split Button, Magellan Nav, Magellan Marker, Sub Nav, Icon Bar
- Forms - Form Base, Input Field, Textarea, Checkbox, Fieldset, Hidden Field, Label, Select Box, Number Input, Slider, Switches

JW Documentation Removed - Four Alternatives

1. Joe removed F1 Docs when F2 was released. He did supply his H1 Doc project, so I replicated it at:

   https://rw2.wdgeo.com/f1demo/

2. Another Domain used for Foundation links is ABCX.CH: Starter Pack, Add-on Pack 1, Add-on Pack 2;
3. Another domain hosting the links is IQ0.DK Docs: Starter Pack, Add-on Pack 1, Add-on Pack 2) (some links broken).
4. The Wayback Machine would be a last alternative.

Foundation 6

Site Styles

1. Site Styes -The control center for your entire Website Design

Swatch Pack

1. Two dozen new swatches that can help you take your Foundation 6 websites to an entirely new level.

Main Stacks

1. Accordian - Organize and navigate multiple documents in a single container
2. Accordian Menu - Vertical only menu that will aniamte all submenus
3. Actions - Foundation Forms supports the following actions. You can add as many actions as you want when a form gets submitted.
4. Animations - Style transitions, Hover, Animations
5. Audio - easily add audio to your webpages. You can play all web firiendly audio formats
6. Autofill - You can autofill form fields with data simply by passing the name of the form fields with the value that you want via the URL
7. Badges - Basic component that displays a number or letter.
8. Block Grid - Allows you to easily layout many elements into a evenly spaced grid.
9. Breadcrumbs - Show a navigation trail for users clicking through your site

10. Button - Link to a URL, Trigger a pre-formatted email, Download a file, Link to a section of your webpage, Open a Lightbox, Dropdown, Off Canvas, Open to a Tab or Accordion section, Submit or reset a form, Easily integrate with 3rd party stacks
11. Button Groups - Conveniently merge multiple buttons into one cohessive component
12. Callout - Create an alert panel to make some text or content stand out on the page
13. Captions - Info that overlays images and content.
14. Cards - Flexible UI component that can be divided into logical sections.
15. Close - Close button can be used anywhere you need something to go away on click. For example, to close a Lightbox, Off Canvas, Dropdown or any other "closable" Foundation 6 component.
16. Code Blocks - Display text in a different format. While this has traditionally been used for short code snippets,
17. Columns -   12 unit grid system. The total of the units a layout will take up is 12.
18. Container -
19. Custom Menus - Manually build a menu however you want.
20. Defintion Lists - List of groups of terms and descriptions. Common uses for this element are to implement a glossary or to display metadata (a list of key-value pairs).
21. Details - Disclosure widget in which information is visible only when the widget is toggled into an "open" state.

22. Dividers - Add accents between content. Style dividers with swatches (style, size, color, etc.)
23. Drilldown Menu - Converts a series of nested lists into a vertical drilldown menu. This menu works best on smaller devices or in a smaller fixed container on larger devices.
24. Dropdown - Dropdown button behaves like a normal button. However, it simply adds a caret to the button that can visually inform the used that the button will trigger some sort of dropdown type panel. This dropdown could contain links or any type of content that you see fit.
25. Dropdown Menu - Laid out both vertically and horizontally, you can have dropdown submenus triggered by the cursor. The Dropdown menu supports as many levels of submenus as you could want.
26. Embed - Generic wrapper stack that should automatically make most embed codes responsive
27. Equalized Heights - By default all column and grid layouts will equalize their heights to the tallest column. Will ensure that your layouts will look symetrical no matter how much content is inside of them.
28. Fields - There are a variety of fields on form. Text, Date, Numbers, Select Box
29. Hamburger - Standard 3 bar hamburger can be used for all of the same functionality as a button
30. Headers - Standard H1-H6 headings
31. Inline Fields - Group labels, fields and buttons inline to create a very streamlined interface

32. Labels - Useful inline styles that can be dropped into body copy to call out certain sections or to attach metadata.
33. Lightbox - Standard modal to display a popup style panel
34. Menu - Menu stack is a simple menu with no animations. Its basically a flexible list of links.
35. Menu Builder - Manually build a menu
36. Off Canvas - Dynamically display content or other navigation inside panels. These panels can be animated from all 4 sides of a container
37. On Page Nav - Navigate to links within the page
38. Picture - Display images, Lazy load, Warehousings, drag/drop, latest image formats such as svg, webp, gif and mp4 (modern alternative to gif)
39. Progress Bar - Add static progress bars to your layouts.
40. Quotes - Display quotes and testimonials onto your webpages
41. Site Styles - Powerful and flexible layout engine in Foundation 6
42. Sizes - Buttons have large, medium, small tiny sizes
43. Slider - Carousel that allows you to animate between multiple slides. Place any stack that you want inside of each slide.
44. Source Order - Adjust the order of columns based on screen sizes. Columns can change their order based on the screen size.
45. Spam Protection - Honeypot, Camptch Human test

46. Sticky - Make content stick to the top or bottom of a browser window
47. Style Transitions - When Hovering; Header, Underscores, Blob, Gradient, Card Content Movement
48. Styles/Buttons - Square, Radius, Round, Hollow, Clear
49. SVG - Scalable Vector Graphics (svg) can be easily added to your site with the SVG stack
50. Swatch Pack - Advanced swatches and utilities to take your site to new levels
51. Tables - Display simple tables onto your webpage. The tables use Markdown to build the tables and apply simple alignment and styles.
52. Tabs - Vertical tabs control content appearing in a fixed container
53. Text - Powered by Markdown
54. Tooltips - Add toolips to any button. This can give the user more information about what a button can do for them. The tooltip position can be easily configured through the settings
55. Top Bar - Simple wrapper around your menu components. It's a useful container that allows you to easily switch between a traditional horizontal menu on larger screens and a hamburger style menu on smaller mobile devices.
56. Transformation - Different menu patterns in one responsive menu plugin with different menus at different breakpoints.
57. Validation - Mark fields on forms as required

58. Vertical Alignment - Define how columns and grids are aligned vertically when you do not want heights to be equalized.
59. Vertical Grid - Just like columns can divide a layout into columns by width, the Vertical Grid allows you to divide a layout vertical into sections as well.
60. Video - The Video stack allows you to easily add videos to your webpages. You can play all web firiendly video formats. It even has full support for .vtt caption files for full accessibility.
61. Visibility - All of the Foundation 6 layout stacks have a unified system for controlling the visibility of content within your layout. You have the ability to show or hide content based on numerous criteria.

Foundry 2

All F2 documentation is in the f2docs.elixirgraphics.com subdomain
